

NEW!

SwingLift

FV1200

Tonne's better for load handling

The new FV1200 has a capacity of 250kg even at its full extension of 4 metres

The new SwingLift FV1200 is a fully hydraulic 1200kg capacity vehicle mounted crane designed for a wide range of load handling applications including service, engineering and deliveries. Compact design, robust construction and light weight ensure the FV1200 can be installed on a wide range of 3.5t+ commercial vehicles to provide reliable and flexible load handling capabilities that reduce or eliminate the need for manual handling, promote productivity and allow operators to comply with health and safety regulations.

PennyHydraulics

The hydraulic slew and boom operation, combined with market leading safety systems, is believed to be unique in the "one tonne" class of vehicle mounted cranes.

- 1200kg MWL at 1.5 metres with the boom fully retracted
- 500kg MWL when the boom is extended to 3.4 metres
- 250kg MWL at full 4.0 metre extension
- full 360 degree slew rotation
- powered boom raise and lower for controlled, precise and safe handling and all round access to loads
- optional hydraulic or electric winch enables the crane to raise and lower loads below ground level

The FV1200 can handle a wide range of loads to either side or rear of the vehicle. A wander lead with simple push button controls enables operators to remain well away from the lifting area when handling loads for ultimate safety.

When stowed, the new FV1200 provides clear and unobstructed access to the vehicle's load space

360 degree
slew rotation

Compact design and total overall weight of under 200kg in standard configuration ensures that the FV1200 can be installed without unduly affecting load carrying capacity. It folds down when not in use to leave clear and unobstructed access to the vehicle and load space. A choice of 12 or 24V power enables simple installation by connection to the existing wiring. The unique mounting socket fitting allows the crane to be transferred between vehicles.
